

Reference for Milagro

The Data Company helps enterprises accelerate business agility by developing technology solutions that unlock the value of data to achieve real business benefits.

We have developed our own software IP, dataFINIUM which is an "Intelligent Data Hub" that can collect, correlate and enrich structured and unstructured data from static and real time sources.

We have developed partnerships with best of breed software vendors around the world for Fraud Detection, Link Analytics, Machine Learning, Predictive Analytics, Social Physics and Data Migration to provide an end to end service to manage the life cycle of data in an enterprise and support them on their journey to Artificial Intelligence.

We have engaged Milagro Interactive as a technology partner with a specific focus on the design and development of e-commerce platforms, interactive websites & portals, and integration of our Live Online Retail (LOR) solution. In addition, Milagro Interactive has delivered UI Design & Integration projects in coordination with our project management teams in the United Kingdom and South Africa.

We consider Milagro Interactive creative and technically competent and have demonstrated reliability and transparency over the last several years. We aim to build on this as a strategic relationship in the future.

Regards

Kali Bagary (CEO)
